

BACKGROUND/PURPOSE

- ➡ DOE Office of Environmental Management is responsible for ER, Waste Management, Decontamination and Decommissioning (D&D), Technology Development, and Long-Term Stewardship and Landlord activities.
- ➡ Past DOE practices generated radioactive and hazardous waste that represents technical and managerial challenges to DOE personnel. The estimation, collection, and sharing of useful cost data is key to managing cost effectively.
- ➡ DOE Program/Project Managers needed training in the area of cost management for EM projects.
- ➡ To help the project and program managers, the EM ACE Team is developing several tools and systems to estimate and capture environmental costs.
